## **SEWER SERVICES**

### **High Pressure Jetting and Vactor Unit**

---

Cleaning of sewers is carried out by our 1800 Eurovac jetting and suction unit as shown below. This is a combined effluent collection and pipe/sewer cleaning vehicle specifically designed for municipal and industrial applications. This multi purpose system is able to collect both wet and dry material including heavy items such as bricks, bottles and compacted sewage from depths of up to 30 metres.

The clean water storage and debris tanks each have a capacity of 8.18 m<sup>3</sup> (1800 gallons).

The jetting pump produces 363 litres/min (80 gpm) @ 2000 psi driven by a six cylinder turbocharged auxiliary diesel engine producing up to 103 kw at 1800 rpm.

The unit provides high speed means of clearing pipes, sewers and culverts from 100 mm to 2.0 metres diameter and eliminates the requirement of separate gully emptiers, jetting machines, winching equipment and teams of labour. Traffic disruption is kept to a minimum.

<p><b><u>MAIN CLIENT INCLUDE</u></b></p>	<p><b>Water Authorities, District Councils, Highway Authorities, Railtrack Scotland, Consulting Engineers, Manufacturing Establishments</b></p>
<p><b><u>GEOGRAPHICAL AREA OF MAIN ACTIVITY</u></b></p>	<p><b>Mainland Scotland and all Islands.</b></p>
