

GEORGE LESLIE LTD

SEWER SERVICES REPAIRS AND MAINTENANCE

When a defect or blockage has been established in a sewer or culvert such as shown below, George Leslie Limited have experienced manpower to carry out repairs by excavation or in some cases by "no-dig" techniques.

This work often follows or operates in conjunction with other sewer services we have on offer such as Sewer/Culvert inspection by C.C.T.V. Survey, or cleaning by high pressure jetting (Vactor). This provides the customer with a comprehensive package of investigation, jet cleaning and where necessary repair.

Work varies from the domestic situation with relatively shallow excavations to the deep City Centre type main sewer which requires sound trench support by close sheeting.

In this department, being part of a large Civil Engineering company, we are well equipped to cater for problems of the more awkward nature where other resources and experience within the company can be drawn upon.

MAIN CLIENTS INCLUDE

Water Authorities, District Councils, Highway Authorities, Railtrack Scotland, Consulting Engineers, Manufacturing Establishments.

GEOGRAPHICAL AREA OF MAIN ACTIVITY

Mainland Scotland and all Islands
